Fire Safety and Evacuation Procedure
Section 8: Fire Drills

8. Fire Drills

Regular fire drills are essential to ensure all residents, staff, and visitors are prepared for a fire emergency. Drills provide an opportunity to test evacuation procedures, identify gaps, and build confidence in emergency response.

8.1 Frequency:

- Fire drills must be conducted at least once every 6 months
- Additional drills should be held when new residents or staff join, or after any major layout changes
- Both planned and unannounced drills may be used

8.2 Procedure:

- Activate the alarm and simulate an evacuation
- Ensure all staff carry out their roles (sweep, escort, roll call)
- Assemble all persons at the designated assembly point
- Complete a headcount and note the duration of evacuation

8.3 Recording and Review:

- Complete a fire drill report form after each drill
- Note issues encountered, such as delays or resident distress
- Use findings to improve the Fire Safety Plan and update staff training
